

LEGAL SECURITY SERVICE

Secure your small-midsize legal practice with our comprehensive law firm security program. GoldSky designed this package to be an affordable and effective means of ensuring that your practice **meets and maintains appropriate security standards** in addition to state and federal compliance mandates.

The GoldSky approach first involves understanding your current situation and defining a remediation roadmap to achieve appropriate security and compliance. Throughout the year, practice employees receive required training on safe computer use as well as co-branded newsletters to help encourage a more security-aware workforce.

Additionally, all employees have access to GoldSky Security Consultants where they can ask both personal and professional security questions and receive expert responses at no charge. To continue protection throughout the year, GoldSky provides end-point malware protection, monitored 24x7x365 by security experts.

about GoldSky's
Legal Security Service

"We were very pleased with the service from GoldSky. In addition to being very professional and knowledgeable, they communicated with our management team every step of the way, so we knew what was going on at all times. Once the project was completed, they delivered a detailed report about the work they did and made recommendations on how to improve our IT infrastructure moving forward. We will continue to use GoldSky as the need arises and would recommend their services without hesitation."
